

Determination of the schemes standard group for JDF import

Assignment of folding schemes occurs by way of the name (JDF DescriptiveName) in the integrated workflow with Prinect 2008. This lets you also define the page orientation and the numbering order in the sheet in addition to the fold type.

In Signastation you can store the relevant schemes in a separate folder for JDF import:

Although you can choose any name you want in Signastation, we recommend that you use a system matching the schemes standard group as shipped. You can thus prevent having to make changes to existing schemes when the customer specific folding catalog is extended.

The system is as follows.

Naming used in the standard schemes

The elements of scheme »F08-07_li_2x2« are taken as an example to explain the naming in standard schemes:

F08-07_	l:	i	_2x2
❶	❷	❸	❹

❶ Name of the scheme as listed in Heidelberg's fold type catalog. First digit: Number of pages per folding sheet-Second digit: Consecutive number (each with leading »0«)

❷ Orientation of the top page after folding:

u (up): upright, head up

d (down): upright, head down

l (left): head to left

r (right): head to right

❸ Numbering order:

i: increment, 1st page is in front after folding

d: decrement, 1st page is at back after folding

❹ Layout:

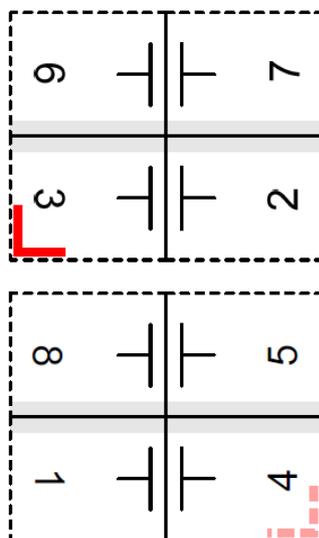

Sheet lengthwise x sheet upright (matrix or grid size)

Special case: The name for a double gate fold is »F06-03_ui_3-4x1«

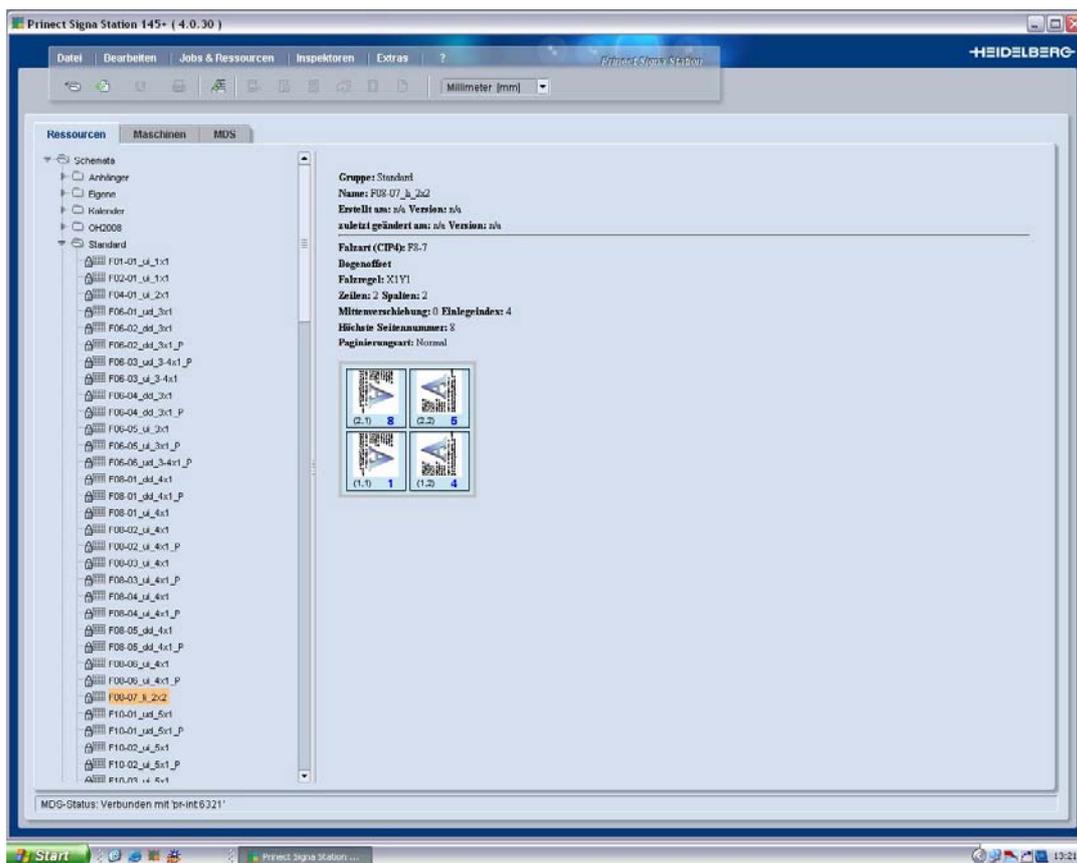

Pagination type »Accordion Fold«:

Numbering is for a brochure if a »P« is added to the scheme name. This corresponds to the "Accordion Fold" pagination mode in the Folding Scheme Editor.

Special case: The name for a double gate fold is then »F06-03_ui_3-4x1_P«

Product analysis

An analysis of the product program is necessary in order to determine the schemes relevant for JDF import. An assessment is required, which products can be standardized and automated. Products differing so far could perhaps be unified so they can be processed with the same folding scheme.

Consolidation of customer templates

The existing fold type catalog in Signastation must be prepared for JDF integration. This should comprise the merging of customer-specific schemes into one group and the removal of duplicates.

Select the templates for JDF integration from this customer group and copy them to the specified folder (e.g. »JDF Integration«) after having named them accordingly.

We recommend that you document the fold types to be used for JDF integration defined in this way in a central overview mandatory for all persons involved.

Folding Schemes				
sample	DescriptiveName	FoldCatalog	NumberUp	
			Columns	Rows
	16-Seiter	F16-6	4	2
	F02-01_ui_1x1	F2-1	1	1
	F04-01_ui_2x1	F4-1	2	1
	F06-01_ud_3x1	F6-1	3	1
	F08-05_dd_4x1	F8-5	4	1
	F08-07_li_2x2	F8-7	2	2
	F16-06_dd_4x2	F16-6	4	2
	F16-10_li_4x2	F16-10	4	2
	F24-08_li_3x4	F24-8	3	4

Establish the process

The process of determining the schemes standard group for JDF import is not complete after initial installation of a JDF integration but repeats from time to time. For this reason it is feasible to begin with a small fold type catalog and to continuously expand it. This is why it should be clearly specified for all persons involved. For example:

1. Suggestion for a new scheme
2. Agreement between prepress and production
3. Installation and test
4. Work instruction and documentation (possibly with sample)
